

# Gastroenteritis Minor Outbreak Policy (Diarrhoea and Vomiting)

This procedural document supersedes: PAT/IC 27 v.5 – Gastroenteritis Policy (Diarrhoea and Vomiting)

The Trust discourages the retention of hard copies of policies and can only guarantee that the policy on the Trust website is the most up-to-date version. If, for exceptional reasons, you need to print a policy off, it is only valid for 24 hours.

| Executive Sponsor(s):           | David Purdue – Chief Nurse                                    |

# Could this be an Outbreak?

NHS

Doncester and Bessetlaw Teaching Hospitals WS Femaleon Text

A patient develops diarrhoea and/or vomiting – could this be an infectious outbreak?

Are 2 or more patients affected who are in the same area and whose symptoms appear to be connected. Do these patient have unexplained D & V not due to medication or condition?

#### Ward staff to review patients

- · Sudden onset of Symptoms
- · Vomiting is projectile
- Diarrhoea is watery type 6/7 on Bristol stool chart
- Symptomatic patients have not had laxatives or enemas within last 48 hours.

# NO ---

YES

# Unlikely to be an outbreak

- Isolate patient
- Send stool sample to the laboratory for testing
- Commence on stool chart.

#### Suspected outbreak

- During office hours contact IPC DRI- 644490 or Bassetlaw 572357.
- Out of hours contact the site team (who will contact the on call Microbiologist).
- · If possible isolate symptomatic patients.
- Send stool samples at the earliest opportunity.
- IPC to contact laboratory to request Norovirus testing.
- · Commence stool chart on patients.
- Complete symptomatic patients LOG sheet(appendix 3).
- During periods of increased incidence the ward may remain open to admission but have restrictions in place (closed bays)
- Staff to be allocated to duties in either the affected or non-affected areas of the ward but not both (unless unavoidable).

#### During an outbreak

- Display outbreak poster to indicate that there is an infection present.
- Non-essential staff must not enter the ward during an outbreak.
- Other Healthcare personal should avoid visiting affected areas if possible, however if they must they should visit the ward last or allocate one member of staff to visit these areas.
- Complete symptomatic patients /staff LOG sheet (appendix 3) daily prior to IPC visit.
- Do not transfer patients or staff to other wards/dept.
- The ward/bays will require an Amber cleaning once the last patient affected is 48 hours clear.

#### 1. INTRODUCTION

Managing outbreaks of gastroenteritis is a common event within hospitals especially during the winter months.

An outbreak is two or more patients with diarrhoea and/or vomiting, or more than the expected number, within a 48 hour time period.

The early detection and appropriate management of episodes is therefore essential to minimise hospital disruption.

It has been shown that larger clinical units and those with higher throughput of patients have increased rates of gastroenteritis outbreaks.

When planning new builds and refurbishments of clinical areas every opportunity should be taken to include adequate provisions of single occupancy rooms and bays with doors.

#### 2. PURPOSE

The purpose of this policy is to provide the basic information healthcare staff will require to recognise and take appropriate action required when a patient/s is suspected of having gastroenteritis.

Prompt and effective measures are essential in controlling the spread of infection between patients, staff and visitors.

The policy is based on a principle of minimising the disruption to important and essential services and maximising the ability of the Trust to deliver appropriate care to patients safely and effectively.

#### 3. DUTIES AND RESPONSIBILITIES

This policy covers infection prevention and control management issues and applies to all health care workers employed by the Trust that undertake patient care, or who may come into contact with affected patients.

Trust staff this includes:-

- Employees
- Agency/Locum/Bank Staff/Students
- Visiting/honorary consultant/clinicians
- Contractors whilst working on the Trust premises
- Volunteers

All staff working on Trust premises, outreach clinics and community settings, including Trust employed staff, contractors, agency and locum staff are responsible for adhering to this policy and for reporting breaches of this policy to the person in charge and to their line manager. They need to be aware of their personal responsibilities in preventing the spread of infection.

#### **Trust Board**

The Board, via the Chief Executive, is ultimately responsible for ensuring that systems are in place that effectively manages the risks associated with Infection Control. Their role is to support the implementation of a Board to Ward culture to support a Zero Tolerance approach to Health Care Associated Infections.

**Director of Infection Prevention and Control (DIPC):** Is responsible for the development of infection and prevention and control strategies throughout the Trust to ensure best practice. The Director of Infection Prevention and Control will provide assurance to the board that effective systems are in place.

**The Infection Prevention and Control Team (IPCT):** is responsible for providing expert advice in accordance with this policy, for supporting staff in its implementation, and assisting with risk assessment where complex decisions are required.

**Matrons:** are responsible for ensuring implementation within their area by undertaking regular audits in ward rounds activities. Any deficits identified will be addressed to comply with policy.

**Ward and Department Managers:** are responsible for ensuring implementation within their area and for ensuring all staff who work within the area adhere to the principles at all times.

**Consultant Medical Staff:** are responsible for ensuring their junior staff read and understand this policy, and adhere to the principles contained in it at all times.

**On-call Managers:** are responsible for providing senior and executive leadership to ensure implementation of this policy.

#### 4. GASTROENTERITIS

Viral gastroenteritis has the ability to spread very quickly within a hospital/healthcare environment causing ward closures in some cases.

The most common cause of diarrhoea and vomiting outbreaks in hospitals is from small round structured viruses (SRSVs) such as Norovirus (NV).

These viruses are more common during the winter months and affect both patients and staff. Symptoms tend to be acute but self-limiting and recovery normally takes place within 72 hours.

#### 4.1 Clinical Features

There is an incubation period of 12-48 hours and the symptoms may last 24-72 hours on average.

Symptomatic individuals are infectious for up to 48 hours after the last episode of diarrhoea and/or vomiting.

Other symptoms may include abdominal cramps and/or nausea, headaches, muscle aches and fever. Recovery is usually rapid.

#### 4.2 Routes of Transmission

- Airborne inhalation or ingestion of virus particles when a patient vomits.
- Contact via the hands.
- Person to person via faecal-oral route.
- Ingestion of contaminated food and drink.
- Environmental contamination from faeces or vomit.

#### 4.3 Management of patients with gastroenteritis

In an outbreak situation the numbers of affected individuals may be high (see section 7 - Definitions)

If an outbreak is suspected it is essential to implement appropriate infection control measures immediately to prevent the spread of infection.

During the outbreak you must regard all patients, staff and visitors who present with symptoms as infectious.

#### 4.4 Ward

As soon as concerns arise please contact the Infection Prevention and Control Practitioners (IPCP) during office hours or the on call Consultant Microbiologist out of hours, via switchboard, who will carry out a risk assessment and advise the ward of further infection control measures to be implemented.

Commence the Outbreak Pathway (see Appendix 1) and Symptomatic Patient and Staff Log sheets (See Appendix 4).

#### Isolate patients as soon as they become symptomatic.

All patients admitted with or who develop diarrhoea and/or vomiting, should be nursed in a single room and remain isolated until asymptomatic for 48 hours.

- Where the numbers of symptomatic patients exceeds the number of single rooms, the IPCT will provide advice.
- In some cases, bays or the entire ward will need to be closed to new admission.

This will only occur after consultation with the DIPC or Consultant Microbiologist and discussion with other relevant personnel.

- Close affected bay(s) to admissions and transfers.
- Keep doors to single room(s) and bay(s) closed.
- Place signage at ward entrance informing all visitors of the closed status and restricting visits to essential staff.
- Daily assessment will take place to ascertain earliest date for Amber clean and reopening.

#### 4.5 Continuous Monitoring and Communications

- On closure and after daily review the IPCT will issue an e-mail to all relevant internal Trust personnel involved, informing them of the outbreak situation and maintain the Trust outbreak data base information available to staff on the IPC webpage at <a href="http://dbhipc/">http://dbhipc/</a>
- The IPCT will brief external partners and public health organisations at the onset and end of the outbreak. This information should be disseminated through normal communication channels (Appendix 2).

• Ensure that stool samples are obtained from all affected individuals and sent to microbiology as soon as possible.

Laboratory request forms should clearly indicate suspected outbreak, date of onset of symptoms, and request testing for culture & sensitivity (C&S) and virology

The IPCT will assess the need for specimens to be sent for Norovirus testing and inform the laboratory staff accordingly.

• Ward staff must maintain an up to date documentation (Appendix 4) of all patients and staff affected and the date of onset of symptoms using the Bristol stool chart format.

Document if any individuals are receiving antibiotic therapy or taking aperients.

Also note if there are any contributory factors which may account for symptoms of diarrhoea and/or vomiting. This information is vital in assisting the IPCT to provide an accurate risk assessment when they visit the ward.

- Ward staff must monitor all affected patients for signs of dehydration (maintaining daily fluid balance chart) and correct as necessary.
- The IPCT will provide daily infection control advice if the ward is affected by gastroenteritis.

#### 4.6 Healthcare Workers

- Ensure all staff are aware of the outbreak situation and how viral gastroenteritis is transmitted.
- Staff are often affected during an outbreak of viral gastroenteritis.

Affected staff should be immediately excluded from work if they are experiencing symptoms of diarrhoea and/or vomiting until 48 hours symptom free.

- Wherever possible, allocate staff to duties in either affected or non-affected areas of the ward.
- Visiting staff such as Physiotherapists, Occupational Therapists and Phlebotomists should
  if possible, visit the affected ward(s) last or allocate an individual to visit affected wards.
  Only essential procedures should be carried out on symptomatic patients.
- Assessments, especially those which will aid discharge should still be undertaken, e.g social care assessments, where the patient is deemed well enough.

#### 4.7 Patient and Visitors Information

 Provide all affected patients with information on the outbreak and the control measures they should adopt.

Patient/visitors information leaflets are available in the Outbreak section of the IPC website. It is the responsibility of the nurse in charge to ensure they are distributed to patients and visitors.

- Visitors may contribute to an outbreak of viral gastroenteritis and should be advised to refrain from visiting if they are symptomatic or not 48 hours free of symptoms.
- Elderly visitors, immuno-compromised individuals and young children may be more susceptible to infection and should be advised to refrain from visiting during the outbreak.
- Visitors should be encouraged to decontaminate their hands prior to, and after visiting, using the ward facilities.
- Visitors must be discouraged from sitting on beds, nor should they use patient toilets.

#### 4.8 Hand Hygiene

Hand hygiene is essential in the prevention of cross infection and hand decontamination
using soap and water is the preferred method of decontamination before and after contact
with all patients with diarrhoea and/or vomiting in their immediate environment.

The use of antiviral alcohol hand rub should only be encouraged on physically clean hands between patients.

All patients should be reminded about good hand washing practices and help should be
offered if their ability to do so is impaired. Non ambulant patients must be offered means
of decontaminating their hands before eating and after using bedpans/commodes.

#### 4.9 Personal Protective Equipment (PPE)

• Personal protective equipment must be used when handling faeces and/or vomit, other body fluids and for direct patient contact.

Disposable aprons and gloves must be removed before leaving the patients room and disposed of as clinical waste.

Hands should be decontaminated immediately using soap and water.

There is no evidence to support the routine use of wearing face-masks when caring for
patients with suspected gastroenteritis but consideration should be given to their use
when attending to a patient who is vomiting. However, the use of masks may instill a
false sense of security and are not a substitute for good infection control/standard
precautions.

#### 4.10 Environment

• It is essential that environmental cleaning is performed to a high standard and cleanliness is maintained.

Special attention must be paid to toilet and bathroom areas, commodes, all horizontal surfaces and frequent touch surfaces such as door handles, flush handles, sinks, taps and nurse call systems.

- Do not leave foods e.g. fresh fruit/chocolates on exposed surfaces.
- Staff should not consume food or drink out in the clinical area, as any exposed food and drink is likely to have been contaminated.

#### 4.11 Equipment

- Use single-patient use equipment wherever possible
- Decontaminate equipment immediately after use e.g. commodes
- Dispose of soiled bedpans/vomit bowls immediately

#### 4.12 Linen & Waste

- While clinical area is closed, discard all linen into a red soluble (alginate) bag and tie, then into a white polythene bag. The outer bag must be tied and secured around the neck of the bag with tape which indicates 'Infected linen'.
- Clean and leave empty beds unmade.
- All non- sharp waste should be disposed of via the infected waste stream.

#### 4.13 Spillages

Stools/vomit must be covered immediately, removed and the area decontaminated.
 Decontamination using the hospital cleaning/disinfecting product is vital to ensure viral particles are destroyed.

#### 4.14 Reducing the risk of spread of infection to other areas

- IPC will provide an outbreak sign for the entrance to the ward. It is the responsibility of the nurse-in-charge to make sure patients/visitors are kept informed of the situation.
- An IPCP will visit the ward every weekday in order to review and reassess the situation.

Out of hours and on a weekend, the Nurse in charge of the ward must contact the on call Consultant Microbiologist via switchboard when further guidance is required.

- Do not accept admissions while the ward is closed unless approved by the IPCT or Medical Director.
- Do not transfer symptomatic or exposed patients to other wards within the hospital or to other hospitals or care institutions (nursing, residential homes etc) whilst they are symptomatic or have been exposed to symptomatic patients.

If there is a clinical necessity for a patient to be transferred to another ward or hospital (e.g. to ICU or theatre) advice must be sought from a member of the IPCT <u>prior</u> to transfer.

A risk assessment will be performed and the receiving unit can then be informed and appropriate precautions taken.

- Where investigations or department visits are required, a risk assessment must take place. The patients care must not be compromised whilst the ward is closed.
  - Communication with the receiving department is essential and the IPCT involved in the risk assessment.
- During the working shift, where possible, do not transfer staff to other wards if they are working on an affected ward.
- NHSP/Agency staff should not work on other wards for at least 48 hours, once they
  have worked on a ward experiencing an outbreak.

#### 4.15 Patients discharged to their own home

- It is not necessary to delay the discharge of symptomatic patients or those who may be incubating gastroenteritis, provided they are medically fit for discharge and do not require nursing or social care at home.
- Advise them to inform the admitting Doctor/ Nurse if they are readmitted within 48 hours of discharge.
- Patients from closed wards should ideally be discharged directly from the ward A risk assessment must be performed before discharging patients to the discharge lounge.

**Please note:** if a patient is being 'fast tracked' home for palliative care contact the Infection Control Team for advice.

#### 4.16 Patients discharge to nursing or residential homes.

- Discharge of an affected patient to a home not experiencing an outbreak of diarrhoea and or vomiting, should not occur until the patient has been asymptomatic for more than 48 hours.
- However, discharge of an affected patient to a home affected by an outbreak can occur provided the home can safely meet the individual's care needs.
- Those patients who have been exposed but asymptomatic may be discharged only on the advice of the IPCT.
- The Care home must be notified of the outbreak during the referral process. Any concerns to be referred to the IPC Team.
- **Please note:** if a patient is being 'fast tracked' to a care home for palliative care contact the Infection Control Team for advice.

#### 4.17 When is the patient/ward clear of infection?

- Patients are usually but not always, deemed non-infectious 48 hours after their last episode of diarrhoea or vomiting.
  - In the elderly or immunocompromised patient they may continue to excrete the virus for a longer duration.
- Further stool specimens are not required once a confirmed positive sample has been detected or to check if an agent has cleared.

- Wards/bays that have been closed may only be re-opened after consultation with the IPCT. Usually the ward can be opened when the last patient with symptoms has had no diarrhoea or vomiting for 48 hours.
- There is often uncertainty at this stage A small number of patients may have persistent symptoms (especially diarrhoea) and it may be difficult to ascribe those symptoms to norovirus with any confidence. Such patients should be removed to single-occupancy rooms if possible and Amber cleaning of bays and general ward areas may then be undertaken.
- A thorough clean of the ward (environment and equipment) must take place prior to beds being re-opened.
- It is the responsibility of the nurse in charge to make sure that cleaning has been undertaken to a satisfactory level before the ward can re-open.
- Following each outbreak a multidisciplinary evaluation should take place to review the outbreak and learn lessons in order to strengthen future plans.

#### 4.18 What happens if symptoms recur?

Contact a member of the IPCT immediately for a further risk assessment.

#### 5. TRAINING/SUPPORT

Please note: The Standard Training Needs Analysis (TNA) – The training requirements of staff will be identified through a training needs analysis. Role specific education will be delivered by the service lead.

#### 5.1 Infection Prevention & Control

Infection Prevention and Control should be included in individual Annual Development Appraisal and any training needs for IPC addressed.

#### 6. MONITORING COMPLIANCE WITH THE PROCEDURAL DOCUMENT

It is the responsibility of all department heads/professional leads to ensure that the staff they manage adhere to this policy. The Infection Prevention and Control Team will review this policy in the following circumstances:-

- When new national or international guidance are received.
- When newly published evidence demonstrates need for change to current practice.
- Every three years routinely.

Incidents where non-compliance with this Policy is noted and are considered an actual or potential risk should be documented as a Datix Report.

| Monitoring  | Who   | Frequency  | How Reviewed  |
|---|---|--|---|
| Effectiveness of policy                           | IPCT  | Weekly   | Measurement of any increased incidence and Alert Organism reviews                                       |
| Outbreak Control<br>Measures                      | The Infection Prevention and Control Practitioners                          | Daily visit or<br>telephone<br>communication to<br>ward              | Maintain an up to date record of all patients & staff with symptoms                                     |
| Patient/s to be nursed in single room /cohort bay | By IPCT and dedicated<br>responsible health care<br>worker                  | 48 hours after their<br>last episode of<br>diarrhoea or<br>vomiting. | Patient/outbreak<br>documentation records.  |

#### 7. **DEFINITIONS**

**Diarrhoea & Vomiting Outbreak** - An outbreak is two or more patients with diarrhoea and/or vomiting, or more than the expected number, within a 48 hour time period.

PPE - Personal Protective Equipment e.g. disposable aprons and gloves.

#### 8. EQUALITY IMPACT ASSESSMENT

The Trust aims to design and implement services, policies and measures that meet the diverse needs of our service, population and workforce, ensuring that none are disadvantaged over others. Our objectives and responsibilities relating to equality and diversity are outlined within our equality schemes. When considering the needs and assessing the impact of a procedural document any discriminatory factors must be identified.

An Equality Impact Assessment (EIA) has been conducted on this procedural document in line with the principles of the Equality Analysis Policy (CORP/EMP 27) and the Fair Treatment For All Policy (CORP/EMP 4).

The purpose of the EIA is to minimise and if possible remove any disproportionate impact on employees on the grounds of race, sex, disability, age, sexual orientation or religious belief. No detriment was identified. (See Appendix 5)

#### PATIENTS LACKING CAPACITY

Sometimes it will be necessary to provide care and treatment to patients who lack the capacity to make decisions related to the content of this policy. In these instances staff must treat the patient in accordance with the Mental Capacity Act 2005 (MCA 2005).

- A person lacking capacity should not be treated in a manner which can be seen as discriminatory.
- Any act done for, or any decision made on behalf of a patient who lacks capacity must be done, or made, in the persons Best Interest.
- Further information can be found in the MCA policy, and the Code of Practice, both available on the Extranet.

**There is no single definition of Best Interest**. Best Interest is determined on an individual basis. All factors relevant to the decision must be taken into account, family and friends should be consulted, and the decision should be in the Best interest of the individual. Please see S5 of the MCA code of practice for further information.

#### 9. ASSOCIATED TRUST PROCEDURAL DOCUMENTS

This policy should be read in conjunction with other infection control policies:

- Hand Hygiene PAT/IC 5
- Isolation Policy PAT/IC 16
- Standard Infection Prevention and Control Precautions Policy PAT/IC 19
- Medical Devices Management Policy CORP/PROC 4
- Spillage of Blood and Other Body Fluids PAT/IC 18
- Health and Wellbeing Policy CORP/EMP 31
- Mental Capacity Act 2005 Policy and Guidance, including Deprivation of Liberty Safeguards (DoLS) - PAT/PA 19
- Privacy and Dignity Policy PAT/PA 28
- Reservation of Powers to the Board and Delegation of Powers CORP/FIN 1(C)
- Management and Control of Incident/Outbreak of Infection PAT/IC 20
- Fair Treatment for All CORP/EMP 4
- Equality Analysis Policy CORP/EMP 27

#### **10. DATA PROTECTION**

Any personal data processing associated with this policy will be carried out under 'Current data protection legislation' as in the Data Protection Act 2018 and the UK General Data Protection Regulation (GDPR) 2021.

For further information on data processing carried out by the trust, please refer to our Privacy Notices and other information which you can find on the trust website: <a href="https://www.dbth.nhs.uk/about-us/our-publications/information-governance/">https://www.dbth.nhs.uk/about-us/our-publications/information-governance/</a>

# **APPENDIX 1 – OUTBREAK PATHWAY**

Definition criteria for an outbreak of viral gastroenteritis:-

| Two or more unexplained cases of diarrhoea | a and/or vomiting. Bristol stool chart type 5 to ${\cal I}$ | 7, |
|--|---|----|
| Outbreak location                          |   |    |

Date and time outbreak reported.....

| Outbreak communication   | Date | Signature |  |
|--|------|-----------|--|
| Report cases of increased numbers of diarrhoea and vomiting    |      |           |  |
| to IPC. DRI 644490. Bassetlaw 572357                           |      |           |  |
| Out of hours contact site manager who will discuss with the    |      |           |  |
| on call Microbiologist.  |      |           |  |
| Commence log sheet (appendix 4) include patients and staff.    |      |           |  |
| Start stool charts on affected patients.                       |      |           |  |
| Await IPC/Microbiologist review;                               |      |           |  |
| If ward to close inform – Matron, Matron of the day (out of    |      |           |  |
| hours), Hotel services.  |      |           |  |
| Non-essential staff to avoid visiting the ward eg. Paper       |      |           |  |
| trolley, hairdresser.  |      |           |  |
| All other service to continue, visit last, or have one         |      |           |  |
| nominated person to visit outbreak locations.eg. phlebotomy,   |      |           |  |
| physio.  |      |           |  |
| Close the bay/ward to admissions. Keep doors closed.           |      |           |  |
| Transfers out to be undertaken on clinical need only eg.       |      |           |  |
| DCC/CCU, not medical outliers.                                 |      |           |  |
| Discharges to patients own home, not nursing or residential    |      |           |  |
| homes (affected areas only).                                   |      |           |  |
| Isolate/cohort symptomatic patients. Close any previous bed    |      |           |  |
| space and observe other patients in the bay for 48 hours.      |      |           |  |
| Obtain stool samples for norovirus testing. No further         |      |           |  |
| samples required once a positive result has been received on   |      |           |  |
| the ward or advised by IPC.                                    |      |           |  |
| Encourage hand hygiene amongst patients after use of toilets   |      |           |  |
| and prior to eating with soap and water.                       |      |           |  |
| All clinical waste and laundry to be treated as infected until |      |           |  |
| ward re-opened.  |      |           |  |
| Increase cleaning to affected locations and toilets.           |      |           |  |
|  |      |           |  |
| Minimise staff movement, only look after either affected or    |      |           |  |
| non-affected patients not both.                                |      |           |  |
| Infantian annial antique                                       | D    | Ciamatuma |  |
| Infection control actions                                      | Date | Signature |  |
|  |      |           |  |
| Outbreak notification to be circulated, to include site        |      |           |  |

| Infection control actions   | Date | Signature |
|---|------|-----------|
| Outbreak notification to be circulated, to include site management team, hotel services and executives. |      |           |
| Daily reviews to be held and information provided for Ops meeting.                                      |      |           |
| Ward to be reopened by IPC/Microbiologist only, following appropriate cleaning.                         |      |           |

#### **APPENDIX 2 - EMAIL CONTACT LIST**

Key Personnel to be contacted (see below) by the IPCT if an outbreak of viral gastroenteritis is suspected and beds/ward to be closed to new admissions. If more than two wards are affected or severe bed disruption is taking place then an outbreak meeting will be convened and chaired by the Director for Infection Prevention and Control.
