Childhood cancer: expanded treatment access is not enough

We read and support the recent Editorial calling for equitable global access to the tools needed to treat childhood cancer. However, we disagree with the statement that, “unlike adult cancers, childhood cancers are largely unrelated to environmental or lifestyle risk factors”, and that therefore, “prevention has a limited role”.

Comment

The next step towards lower complication rates in fetal therapy for congenital diaphragmatic hernia

Antenatal treatment of fetuses with moderate or severe congenital diaphragmatic hernia (CDH) has evolved from an experimental surgical approach into an evidence-based fetal intervention for selected high-risk pregnancies.

Health Policy

Children in all policies: lessons from a global collaboration to promote the health and wellbeing of children and future generations

Currently children’s needs, perspectives, and rights are not adequately included in public policies, with negative consequences for the health and wellbeing of children and future generations.

Newborn screening for birth defects in LMICs cannot wait

Low-income and middle-income countries (LMICs), gains in child survival reveal an important reality: birth defects account for a growing share of deaths among children younger than 5 years and cause substantial, often unmeasured, disability and long-term morbidity.

Pharmacotherapeutic Decisions in Autism

Perspective

Medication management in autism requires clinicians to navigate uncertainty while respecting the experiences of autistic people and their families. Shared decision making can be a helpful approach.
