Re: Your request made under the Freedom of Information Act 2000

I am a student doing a research project on the different computer systems used by NHS trusts across a range of domains for the ultimate purpose of improving public health information.

It's perhaps worth preceding the specific details of the information I'm after with the fact that this information is deceptively easy to obtain and doesn't require an expert in IT to retrieve – in order to provide us with some benefit, one must have simply made use of the Trust's technological infrastructure in some capacity.

Therefore, I would be very much appreciative if you, or someone else from Doncaster and Bassetlaw Teaching Hospitals, would be able to point me towards the different computer systems your trust uses for:

- Electronic Health Records:

  No single system used for an Electronic Health Record; the majority of patient records remain on paper.

- Imaging:

  Vital Images – Zillion – RIS (Radiology Information System)
  FujiFilm – Synapse – PACS (Picture Archive and Communication System)
  Visbion – Visbion – Mammography PACS
  PHE + Hitachi Consulting – NBSS (National Breast Screening System)
  Siemens – Syngo.Via – 3D image reconstruction software
  Brainlab – TraumaCad – 3D image reconstruction software
  Hologic – Physician's Viewer – Osteoporosis management

- Medication/prescriptions:

  WellSky (JAC)

- Accident and Emergency:

  Emis Health - Symphony
