Re: Your request made under the Freedom of Information Act 2000

Please will you set out the average delay between referral of a patient for a total hip replacement, and the operation taking place in February 2020, at Doncaster hospital.

The average wait from referral to treatment was 20 weeks.

Please will you set out the average delay between referral of a patient for a total hip replacement, and the operation taking place in February 2020 where the referral is to Park Hill hospital under the partnership scheme with the NHS.

Unfortunately, we are unable to separate out Parkhill as the facility to identify this in Referral to Treatment data was introduced from June 2021.
