Re: Your request made under the Freedom of Information Act 2000

I am carrying out some research for a report, trying to ascertain preparedness for carbon zero in the public sector. I am particularly interested in public sector organisation's understanding of current energy usage.

I would like to know:

a) The number of electric, gas, fuel & water meters the organisation has (billing meters and sub-meters)

21 Meter that are used for billing.

A number of sub meters are on site but these are not actively monitored.

b) The number of those meters that are manually read & recorded.

16 manual read

c) The number of those meters that are AMR (Automated Meter Reading) meters.

5 AMPR

d) Across how many sites the meters distributed.

3 sites

Please note that I am only interested in the organisation's buildings - not domestic buildings associated with the organisation.
